ZWEINOTE whitepaper 2017.09.21

Hayato Kameta   Zweinote.com

BACKGROUD and CONCEPT

Expecting singularity moment to meet us soon, to keep our being motivated to enjoy our journey, to create contingent plan for our biosphere, we want to plan habitable zoon on other planets within our existing universe. Mars is probably the closest target. We want to estimate the value of the land and resources representing particular steradian and location on that planet. The value is not just economical value of the land or buildings, but also includes the resources and gas composition and stability of the physical condition. Those condition and criteria and matrix can be quite different from those in urban cities on earth. Shape and structure of new age space vehicles and ports, form and system of transportation and resource infrastructures, may be quite different from those on earth with different gravitational and chemical and electro-magnetic environment. EarthCalc will calculate those in earth, starting from co-operating with AutoCalc and Namazu which are both produced by Zweispace, but not limiting to economic criteria but expand into physical value of the given steradian and location of earth. We use blockchain technology first to register our traditional real estate registration data then move into other data. We create our own logics to calculate the value of each location. Then we share the software for the contributing node among our network as a system. We starts with blockchain technology, but we think blockchain is just an idea to store small amount of data in a distributed and chained simple ledgers. We will create more sophisticated programs not just to calculate, but also to store as well.

Zweinote is the app token to support various industries globally with the power of internet and computing machines. At first, Zweinote helps global real estate transaction and registration. Finding owners of lands, then evaluate and register that to our ledger and to blockchain. With the power of AI, land price will be found by automated building plan and rent roll estimation already, but not just that, will also evaluate other elements and qualities. For example, earthquake will be more accurately assessed with the help of not just the world top level earth scientist and professional architects, but by machine learning AI as well. We think the blockchain consumes too much resource for poor performance for massive transaction, but some advantage in storing small amount of data. We will soon create our own mining system without depending too much on the existing blockchain technologies.

DISCLAIMER

Real estate registration on Blockchain

The real estate transaction data used in the zweinote ecosystem will be stored in blockchain. We may eventually create our own chain, but at the moment, we are going to store these data into bitcoin blockchain. Any other proposals are welcome and we will let our users chose which chain in the end. Real estate data in transitional sovereignty or no sovereignty like in Mars may be safer to be stored in blockchain or better ledger for the benefit and economy of all property owners and realtors. Zweinote will aim to provide lasting and immutable real estate registration and ledgers.

Usage of ZWEINOTE

ZWEINOTE can be used to run Zweinote Applications.

Zweinote Application [to be launched]

At the time of Toke Offering, Zweinote Applications include:

Projects (RealEstateTransaction&Registration)　[unit:ZWN]

EarthCalc (RealEstateArchitect&Calculator)　[unit:EST]

MarsCalc (RealEstateArchitect&Calculator)　[unit:MST]

Zweispace helped local realtor in Tokyo to achieve 2000% IRR or annual 2000% return on investment in 2016 and is continuing to do so in 2017.

With especially AutoCalc, the Japan economic version of EarthCalc, user may drastically increase the chance of making good and fast decision in real estate industry. Lots of industry professionals want to use AutoCalc including largest real estate enterprise. Zweispace is offering free usage now, but will limit by the end of 2017. They plan to limit usage to ZWEICOIN holders and ZWEISPACE real estate and construction partners.

In Tokyo, creating a simple apartment building plan takes at least three days to two weeks with the cost of some hundreds of dollars to around two thousand dollars. This Robot Architect, AutoCalc will create building plan with its own sophisticated algorism and with machine learnt rent roll curve, AI engine will create floor design with highest rent roll for the given land. By being able to assess the value of the land at the speed of light, more correctly than human professionals in most cases, it can generate very competitive money-making opportunities for those who run.

Government relations
We want to work together with local government and regulators. Any countries with questions may ask us to regulate their country properly, and we will respond properly to help them understand our operation.

Under the status quo, we don't conduct Token offering or any kind in those countries bellow. Until regulatory framework is set clearly in later date, we want to avoid possible issues and misunderstanding.

No token offering in countries bellow;
Japan
U.S.A.
China
Korea (added: October 2017)

Schedule
We plan to offer Token in November 2017.
deliver tokens in 10 working days and finish delivering first lot within 2017.

DISCLAIMER (again)
This Token offering is for Non-U.S., Non-Chinese, Non-Japanese, Non-Korean residents, to avoid unnecessarily complexity for regulators. We may offer tokens, in those jurisdiction, once regulatory climate calm down with less misconduct among crypto entrepreneurs. We respect each countries' sovereignty and rather enjoy working with governments and off course it's licensed local realtors, worldwide. THIS TOKEN is not guaranteed its value or principal from NO ONE, NO INSTITUTIOON, NO GOVERNMENT. THIS TOKEN CAN BECOME ZERO VALUE.
